

WELCOME TO
WOMEN'S HEALTHCARE
DESIGNED AROUND YOU

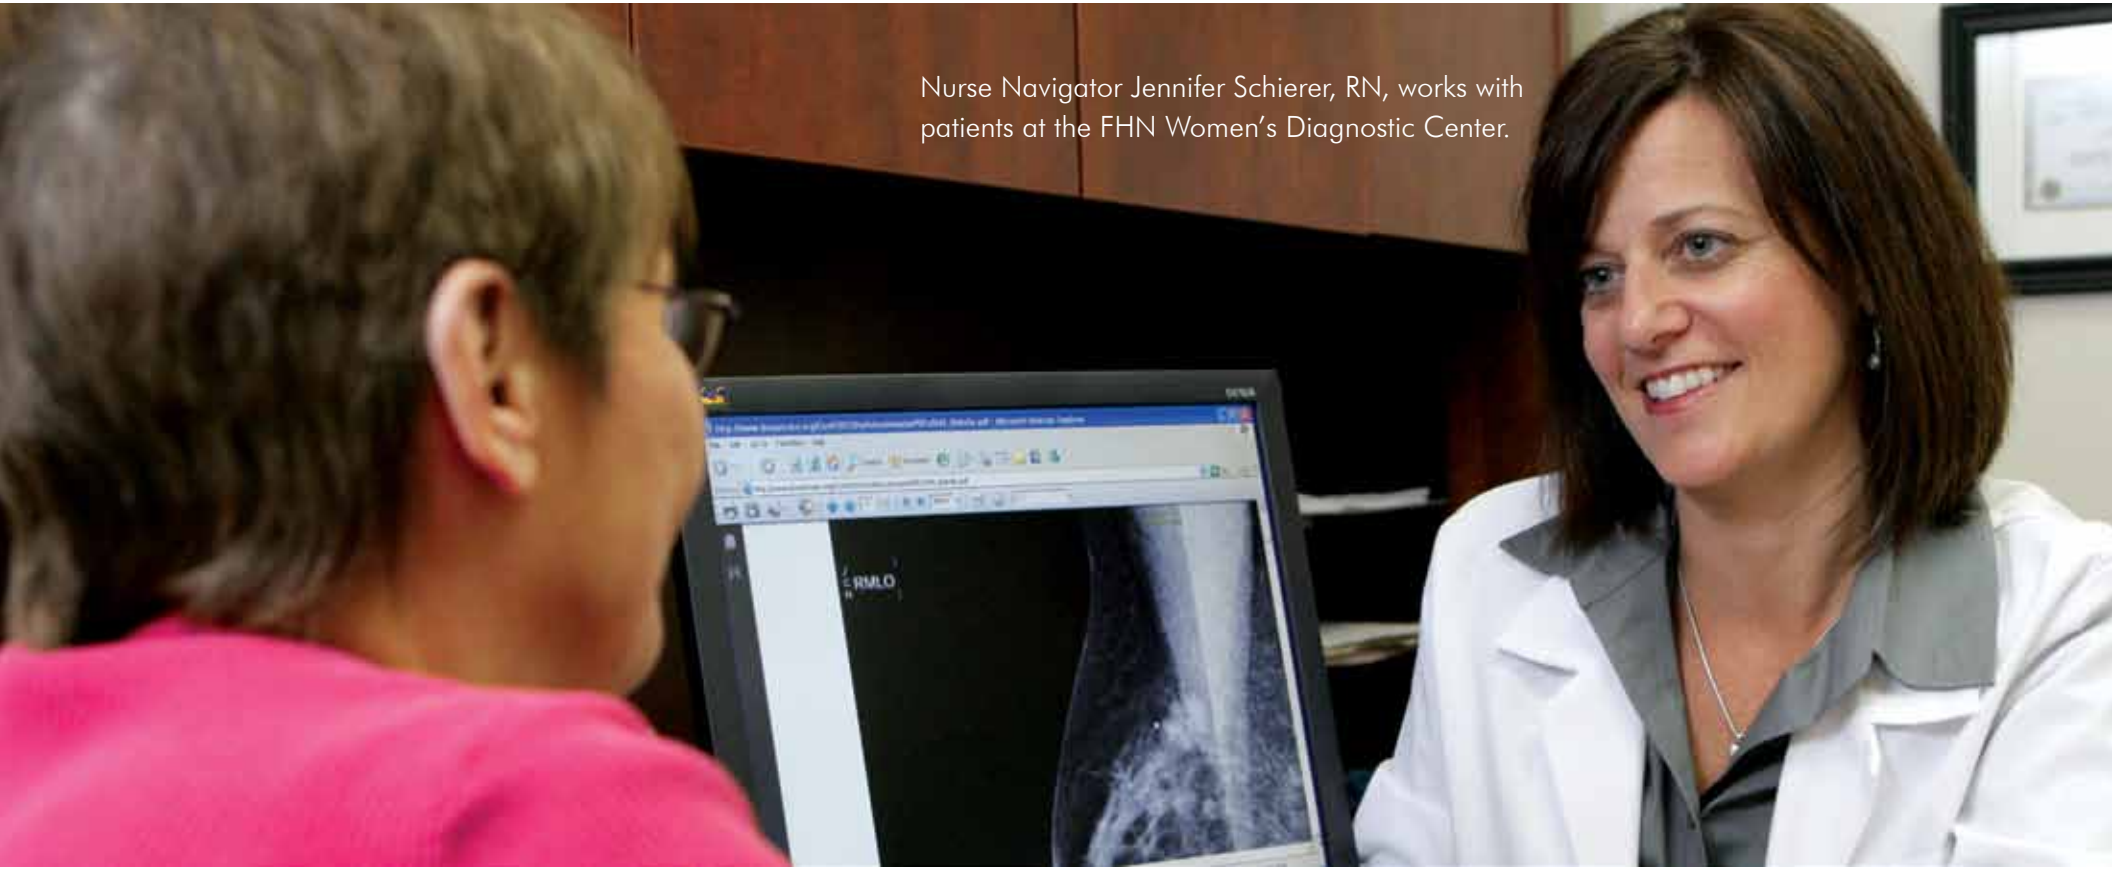

We're here. For you.

FHN

WE KNOW THAT A WOMAN'S HEALTH IS AS IMPORTANT MENTALLY AND EMOTIONALLY AS IT IS PHYSICALLY.

Nurse Navigator Jennifer Schierer, RN, works with patients at the FHN Women's Diagnostic Center.

The FHN Women's Diagnostic Center, located in FHN Memorial Hospital, extends a warm invitation for you to appreciate enhanced personal amenities while we bring you the latest in all-digital diagnostic equipment. Our Women's Diagnostic Center pairs leading-edge diagnostic technology with the highly personalized care you expect, convenient and close to home.

it's personal

COMFORTABLE, CLOSE BY

Your comfort is important to us. While you're having tests done at the Women's Diagnostic Center, our goal is to make you comfortable and give you as much privacy as possible.

We've taken care to locate the Women's Diagnostic Center in a part of the hospital that is blocked from foot traffic. The general public doesn't have access to our hallways, so you can feel comfortable if you need to move to another room for tests.

A TEAM BUILT AROUND YOU

If you need to undergo further testing, our Nurse Navigator will join your healthcare team. She will coordinate further tests and treatments if necessary, as well as educate and assist you and your loved ones.

She will serve as your advocate and educator, coordinating testing and care and helping to support you and your family if testing is needed beyond a routine mammogram. As your healthcare team point person, she will coordinate the recommendations of numerous specialists to help you make the best, most informed choices about your care.

If you have any questions or concerns, your Nurse Navigator and the Women's Diagnostic Center team are here to help.

THE LATEST TECHNOLOGY

The FHN Women's Diagnostic Center features a full slate of all-digital diagnostic testing, including:

FULL-FIELD DIGITAL MAMMOGRAPHY

Full-field digital mammography is faster and gives more accurate readings for women under 50, women with dense breast tissue and women who are nearing menopause. Digital files also make it easier for our experts to read your mammogram, which can result in fewer retests, and these files can easily be stored and sent wherever necessary.

DIGITAL BONE DENSITOMETRY

Digital bone densitometry lets us measure the density of your bones to assess your risk of developing osteoporosis. Your bones change as you age, so digital densitometry equipment helps us keep track of your bone health.

ULTRASOUND SCANS

Ultrasound scans use sound waves to help us visualize many types of tissues and anatomy. Sound waves create digital images to diagnose multiple disease processes as well as images of the baby during a pregnancy.

STEREOTACTIC AND ULTRASOUND-GUIDED MAMMOTOME BIOPSIES

When a lump is found in a patient's breast, a biopsy – the removal of cells for examination – is usually one of the first diagnostic tests we perform. We offer the minimally invasive Mammotome® biopsy, an outpatient procedure that requires local anesthetic, a single incision and no stitches. A radiologist performs this stereotactoc biopsy at the FHN Women's Diagnostic Center, using x-ray technology to visualize and guide the biopsy needle.

In an ultrasound-guided biopsy, the radiologist uses sound wave technology to visualize and guide the biopsy needle.

Both procedures cause little discomfort, and you may resume daily activities right after the procedure.

TAKE COMFORT IN OUR CARE.

For more information on the FHN Women's Diagnostic Center, call us toll-free at 1-877-6000-FHN (1-877-600-0346) ext. 903.

To schedule a mammogram, call 1-815-599-6860.
